I believe in the importance of saving the environment. This is what I'll do to save the environment in the future. I want to focus on water conservation because I live in California, and we have lots of droughts. I will use the motto "reduce, reuse, and recycle". I will conserve water and then reuse the water to water plants, wash dishes, bring the water on trips to wash my hands, refill toilet water, and clean floors.

An easy way to conserve water is to collect water in a bucket while my shower is heating up. The collected water can be reused in several ways. First, I can reuse the water to water my mom's plants to help them grow. Second, I can use the water to wash dishes. Instead of turning the water on and off, I can pour tiny amounts of water from the bucket to rinse out dishes. Third, I can reuse the water to fill up plastic water bottles (I'm also recycling plastic water bottles), and bring the bottles on trips, so that when I go hiking, for example, I can clean and wash my hands. Fourth, I can reuse that water to fill up the toilet bowl. After flushing the toilet, I can conserve water by filling the toilet up with the saved water. Lastly, I can reuse saved water to help clean and mop the floors. As you can see, there are several ways to reduce, reuse, and recycle water.

To conclude, saving the environment, especially conserving water, can help prevent droughts in California. I'll do my part to conserve water, and I'll tell my friends and family to help too.
