Imagine yourself encompassed by trees, sunshine pouring on your face lighting up your skin, the crisp smell of pine, and the fresh, clean oxygen. Visualize every one of those trees stripped away because of us. Instead of the carbon dioxide being absorbed by these trees that are cut down the CO₂ now goes into the atmosphere causing the earth to heat. Now let's consider another significant addition to the problem which is trees getting hacked down, removed, and used for people's needs. Overall, it's bad for animals, wildlife, and the human race. If we want to *truly* start creating a positive impact on our planet we need to understand that the roller coaster along the way will be more than bumpy. We'll have to sacrifice more than people are comfortable adjusting to.

Greenhouse gas emissions let out carbon dioxide, in 2021 alone there were 37.12 billion metric tons of CO₂ released. These greenhouse gas emissions are harmful to the environment because it causes the atmosphere to thicken. The atmosphere thickening then causes the earth to slowly warm since the heat from the sun travels inside the shelter of the ambiance and only some can escape.

Trees are very important for there to be a possible solution to global warming. Although they aren't only reliable for reducing the amount of CO₂ by taking it in and emitting oxygen, trees also are good for the environment. Animals rely on them for shelter and food to feed themselves and their family. We then cut down those trees, which adds to global warming and our polluted air and atmosphere.

Planting more trees will produce a positive solution and begin to address the whole cycle of climate change that's hurting planet earth. The cause of planting trees helps the environment and guides the amount of CO₂ to go down, yet the amount of oxygen to go up. The process then reduces, instead of adds to Climate change.

Saving the earth is something more people should invest time in for tomorrow's generation. Activism of all types can vary from donating a tree to being a part of a non-profit organization such as Earthjustice. Our planet will start to heal, one seed at a time.
